

Migrate to a modern cloud data platform

Performance and cost benefits with managed risk, on Snowflake or Databricks.

4

phase method

Elite

Snowflake Service Partner

Phased

waves, not big-bang

From: legacy platform

Fixed capacity, over-provisioned ahead of demand.
Storage and compute coupled; jobs contend.
Capacity licensing that is hard to attribute.
Data shared via copies and extracts.

To: modern cloud data platform

Elastic compute that scales with the workload.
Storage and compute separated; no contention.
Consumption pricing you can tag and govern.
Governed in-place sharing and marketplace access.

How we migrate

- Assess the legacy estate, dependencies, and cutover risk.
- Design the target architecture and a phased plan.
- Migrate in phased waves with execution support.
- Optimise performance and cost once workloads land.

Why LEIT

- Elite-partner delivery - Snowflake Service Partner Elite.
- Optional FDA/FDE discovery scopes the migration against quantified friction.
- Routes on to FinOps and Data Care Pack run-state.
